What is the 8001 System?

The 8001 Remote System was designed to do three things:

FIRST: to create a product that allows users to control their fireplace with their desired Smart Home System.

SECOND: ensure that the 8001 System is « **Backwards Compatible** for our most popular remote systems.

THIRD: to not limit the 8001 to any particular Smart Home System.

## Will this work on my Customers Fireplace?

Answer these two questions:

1: Does your customer use a Smart Home System with Smart Plugs?

2: Will the customers fireplace operate with a standard dry-contact 1001-A Receiver?

If you answered **YES** to both of these questions, then the 8001 System will work.
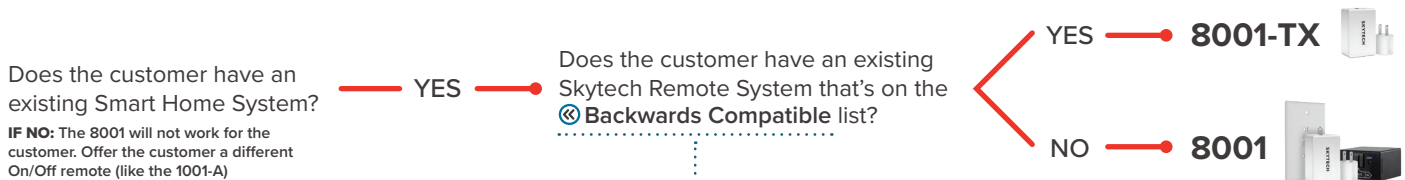

Simple Set Up

1: Add your preferred ① **Smart Plug** to your Smart Home System and name it "Fireplace".

2: Then, plug the ② **Adapter** into the ① **Smart Plug**. Plug the ③ **Transmitter** into the ② **Adapter** *(the adapter isn't necessary if your smart plug has a UBS port)*.

3: Pair the ③ **Transmitter** with the ④ **Receiver** the same way as any other On/Off Skytech Remote Control.

NOT INCLUDED

| ① Smart Plug | ② Adapter | ③ Transmitter | ④ Receiver |

Why is there no Smart Plug included in the 8001 or 8001-TX? It's *possible* for Skytech to include a **Smart Plug**, but that would force the 8001 to become dependent on whatever Smart Home System that particular **Smart Plug** works with. By not including a **Smart Plug**, we allow customers to use their existing Smart Home System that has a **Smart Plug** they already know & use.

Which Smart Plug is best for the 8001 & 8001-TX? That's the beauty of this system... *it doesn't matter!* All a **Smart Plug** does is tell something to turn on or off (power or no power). We simply use that function to turn the fireplace on or off.

How do I know which model my customer needs? 8001 **vs** 8001-TX

Does the customer have an existing Smart Home System? — **YES** — Does the customer have an existing Skytech Remote System that's on the « **Backwards Compatible** list?

IF NO: The 8001 will not work for the customer. Offer the customer a different On/Off remote (like the 1001-A)

YES — **8001-TX**

NO — **8001**

« BACKWARDS COMPATIBILITY

The 8001-TX is Backwards Compatible with the following Skytech models:

| 1001-A | 1001T-LCD-A | 1420-A | 1420T-LCD-A |

What's the **Bottom Line?**

Remember all those customers that you sold a 1001-A, or a 1001T-LCD-A?
YOU CAN DO THAT AGAIN!

The 8001 & 8001-TX together give you an entirely new way to sell to your existing customer base, and appeal to the new technology-driven, untapped marketplace. The best part is, it works with any Smart Home System!

Check out the 8001 online content to help you in your selling process of the 8001 & 8001-TX.
